Add An Extra Layer of Security to Your Front Desk

Quick Communication for Sensitive Situations.

Peace of Mind at Work.

SAM gives your secretary a tool to communicate with management discreetly.

Instant notification to all Virtual Assistant users.

Repond quickly to emergency situations where your receptionist is unable to use the telephone.

Services list

- ▶ Discreet Security Button
- ▶ Custom Message per User
- ▶ Designated Recipients of Security Request
- ▶ Receipt of Security Request
- ▶ Easy Administration

Each Security Button can be customized with a specific message. The message can include dynamic information about the telephone station that caused the security request. The information in the message can include, but is not limited to, Name, Department, Room, Floor and Building.

What is SAM and what does it do?

The Security Alert Module (SAM) is an application developed from direct customer request to incorporate security features into their telecommunications systems. SAM is a component of INterra Virtual Assistant, a software application that integrates a user's desktop telephone with their personal computer for the benefit of enhanced functionality, desktop control and simplified telephone operations.

The Security Alert Module provides any company with an invaluable tool in all types of emergencies. The sole purpose of SAM is to provide immediate notification to INterra Virtual Assistant users (via the silent message module) when help is needed.

The Security Alert Module is an invaluable tool in emergency calling situations. It was specifically designed for users in isolated areas who need to request help without the need to pick up a phone. Using the Security Button, users can notify an individual or group that help is needed.
